
Hotel Stone Application Master Handbook

SCENARIO ALBUM · HSST KNOWLEDGE LIBRARY

Published by: Hengsheng Marble S&T; Co., Limited

Version: V1.0 · 2026

Intended readers: hotel operators / design institutes

Contents

1. The Overall Strategy for Hotel Stone
2. Lobby and Public Areas
3. Guest Rooms and Bathrooms
4. Dining and Banqueting
5. Cost and Schedule Control
6. Maintenance Handover

The Overall Strategy for Hotel Stone

The core proposition of hotel stone is "first-glance luxury × ten-year maintainability". Lobbies and public areas carry the brand narrative, guest rooms carry daily durability, back-of-house carries cost efficiency. HSST has served 1,000+ star-rated hotel projects — this handbook distils that experience.

Lobby and Public Areas

Floors: large book-match / medallion layouts built on slab-scan modelling; circulation routes in honed or satin anti-slip finishes.

Feature walls and front desk: book-match veining as the visual anchor, verified under lighting (a full-scale dry-layout rehearsal is recommended).

Columns and stairs: five-axis CNC keeps the generatrix consistent on curved cladding and helical treads.

Guest Rooms and Bathrooms

Guest-room vanities: engineered quartz or scratch-resistant granite; bathroom walls: thin marble panels with sealer; shower floors DCOF ≥ 0.42 ; six-face sealing in all wet areas.

Dining and Banqueting

Ballroom floors in abrasion-resistant granite or high-density marble with renovation allowance; avoid light-coloured porous varieties for F&B; tops.

Cost and Schedule Control

Slab-scan pre-layout reduces book-match waste by 8–15%.

Phased supply with on-site re-measurement avoids rework.

One-stop fabrication at HSST's 80,000 m² Shuitou base under 68 quality nodes delivers lead times typically 20–30% shorter than the industry average (volume-dependent).

Maintenance Handover

Deliver a stone archive (variety / batch / sealing / care intervals) with property training to keep the look for a decade.
